Network Computing courses

Maël Auzias

ENSIBS - UBS

October 2014

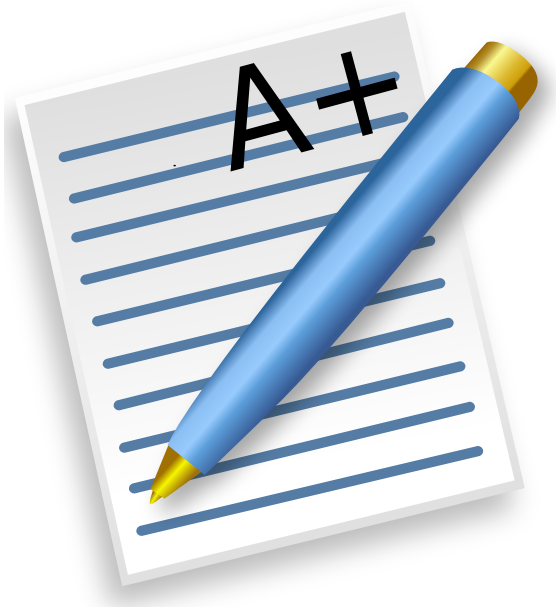
Figure : teaching.auzias.net

Course details

Objectives

- How do *computers* communicate?
- What are the mechanisms **under** an HTTP request or a telegram message?
- Networks are all around us, better study them!

Course details



Evaluation

- Short test at the beginning of every lesson (5 min) ?
- Project
- Final exam (1 hour)
- All same weighting

Material

- Slides available at teaching.auzias.net (github too)

Presentation Outline

Definitions

- **Network:** an **interconnected** group or system

Definitions

- **Network:** an **interconnected** group or system
- **Internet:** world wide **interconnected system of networks**
  RFC791 (September 1981)

Definitions

- **Network:** an **interconnected** group or system
- **Internet:** world wide **interconnected system of networks** RFC791 (September 1981)
- **IP:** Internet **Protocol** provides the functions necessary to deliver a package of bits from a source to a destination over a network

Definitions

- **Network:** an **interconnected** group or system
- **Internet:** world wide **interconnected system of networks** RFC791 (September 1981)
- **IP:** Internet **Protocol** provides the functions necessary to deliver a package of bits from a source to a destination over a network
- **(world wide) Web: network** consisting of a collection of Internet websites using HTTP

Definitions

- **HTTP:** Hypertext Transfer **Protocol**, application-level protocol for distributed, collaborative, hypermedia information systems draft HTTP2 (July 2014)

Definitions

- **HTTP:** Hypertext Transfer **Protocol**, application-level protocol for distributed, collaborative, hypermedia information systems draft HTTP2 (July 2014)
- **FTP:** File Transfer **Protocol** promotes sharing of files, encourages the use of remote computers RFC959 (October 1985)

Definitions

- **HTTP:** Hypertext Transfer **Protocol**, application-level protocol for distributed, collaborative, hypermedia information systems draft HTTP2 (July 2014)
- **FTP:** File Transfer **Protocol** promotes sharing of files, encourages the use of remote computers RFC959 (October 1985)
- **TCP:** Transmission Control **Protocol** is intended for use as a highly reliable host-to-host RFC761 (January 1980)

Definitions

- **HTTP:** Hypertext Transfer **Protocol**, application-level protocol for distributed, collaborative, hypermedia information systems draft HTTP2 (July 2014)
- **FTP:** File Transfer **Protocol** promotes sharing of files, encourages the use of remote computers RFC959 (October 1985)
- **TCP:** Transmission Control **Protocol** is intended for use as a highly reliable host-to-host RFC761 (January 1980)
- **UDP:** User Datagram **Protocol** provides a procedure for application programs to send messages to other programs with a minimum of protocol mechanism RFC768 (August 1980)

Definitions

- **HTTP:** Hypertext Transfer **Protocol**, application-level protocol for distributed, collaborative, hypermedia information systems draft HTTP2 (July 2014)
- **FTP:** File Transfer **Protocol** promotes sharing of files, encourages the use of remote computers RFC959 (October 1985)
- **TCP:** Transmission Control **Protocol** is intended for use as a highly reliable host-to-host RFC761 (January 1980)
- **UDP:** User Datagram **Protocol** provides a procedure for application programs to send messages to other programs with a minimum of protocol mechanism RFC768 (August 1980)
- **RFC:** Request For Comments (Internet Draft (ID), RFC, Internet Standard)

Definitions

- **Router:** network **hardware** providing routing services

Definitions

- **Router:** network **hardware** providing routing services
- **Routing: algorithm processed** to decide where to forward a packet

Definitions

- **Router:** network **hardware** providing routing services
- **Routing: algorithm processed** to decide where to forward a packet
- **Forwarding: action** of moving a packet from one NIC to another

Definitions

- **Router:** network **hardware** providing routing services
- **Routing: algorithm processed** to decide where to forward a packet
- **Forwarding: action** of moving a packet from one NIC to another
- **NIC:** Network Interface Card
- **Switch (hub):** network **hardware** connecting systems using packet switching

Definitions

- **Router:** network **hardware** providing routing services
- **Routing: algorithm processed** to decide where to forward a packet
- **Forwarding: action** of moving a packet from one NIC to another
- **NIC:** Network Interface Card
- **Switch (hub):** network **hardware** connecting systems using packet switching
- **Packet switching:** forward-like method regardless of the content (destination-based)

Definitions

- **Router:** network **hardware** providing routing services
- **Routing: algorithm processed** to decide where to forward a packet
- **Forwarding: action** of moving a packet from one NIC to another
- **NIC:** Network Interface Card
- **Switch (hub):** network **hardware** connecting systems using packet switching
- **Packet switching:** forward-like method regardless of the content (destination-based)
- **NAT:** Network Address Translation, router modifying IP address into another IP address.

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC
- **Client: computer** able to send requests to a server

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC
- **Client: computer** able to send requests to a server
- **Request: application message** destined for a server (*order*)

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC
- **Client: computer** able to send requests to a server
- **Request: application message** destined for a server (*order*)
- **Server: computer** able to respond a client's requests

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC
- **Client: computer** able to send requests to a server
- **Request: application message** destined for a server (*order*)
- **Server: computer** able to respond a client's requests
- **Request: application message** destined for a client (*result*)

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC
- **Client: computer** able to send requests to a server
- **Request: application message** destined for a server (*order*)
- **Server: computer** able to respond a client's requests
- **Request: application message** destined for a client (*result*)
- **Fat client: application** where most functions are processed by the client itself

Definitions

- **Node (network):** any entity that can send/receive packets from a network through a NIC
- **Client: computer** able to send requests to a server
- **Request: application message** destined for a server (*order*)
- **Server: computer** able to respond a client's requests
- **Request: application message** destined for a client (*result*)
- **Fat client: application** where most functions are processed by the client itself
- **Thin client: application** where most functions are carried out on a central server

What kind of networks is it ?

- **BAN:** Body Area Network

What kind of networks is it ?

- **BAN:** Body Area Network
- **PAN:** Personal Area Networks

What kind of networks is it ?

- **BAN:** Body Area Network
- **PAN:** Personal Area Networks
- **(W)LAN:** (Wireless) Local Area Networks (home, office, school or airport)

What kind of networks is it ?

- **BAN:** Body Area Network
- **PAN:** Personal Area Networks
- **(W)LAN:** (Wireless) Local Area Networks (home, office, school or airport)
- **MAN:** Metropolitan Area Networks, can cover a whole city

What kind of networks is it ?

- **BAN:** Body Area Network
- **PAN:** Personal Area Networks
- **(W)LAN:** (Wireless) Local Area Networks (home, office, school or airport)
- **MAN:** Metropolitan Area Networks, can cover a whole city
- **WAN:** Wide Area Networks cover a broad area (Internet)

Topologies

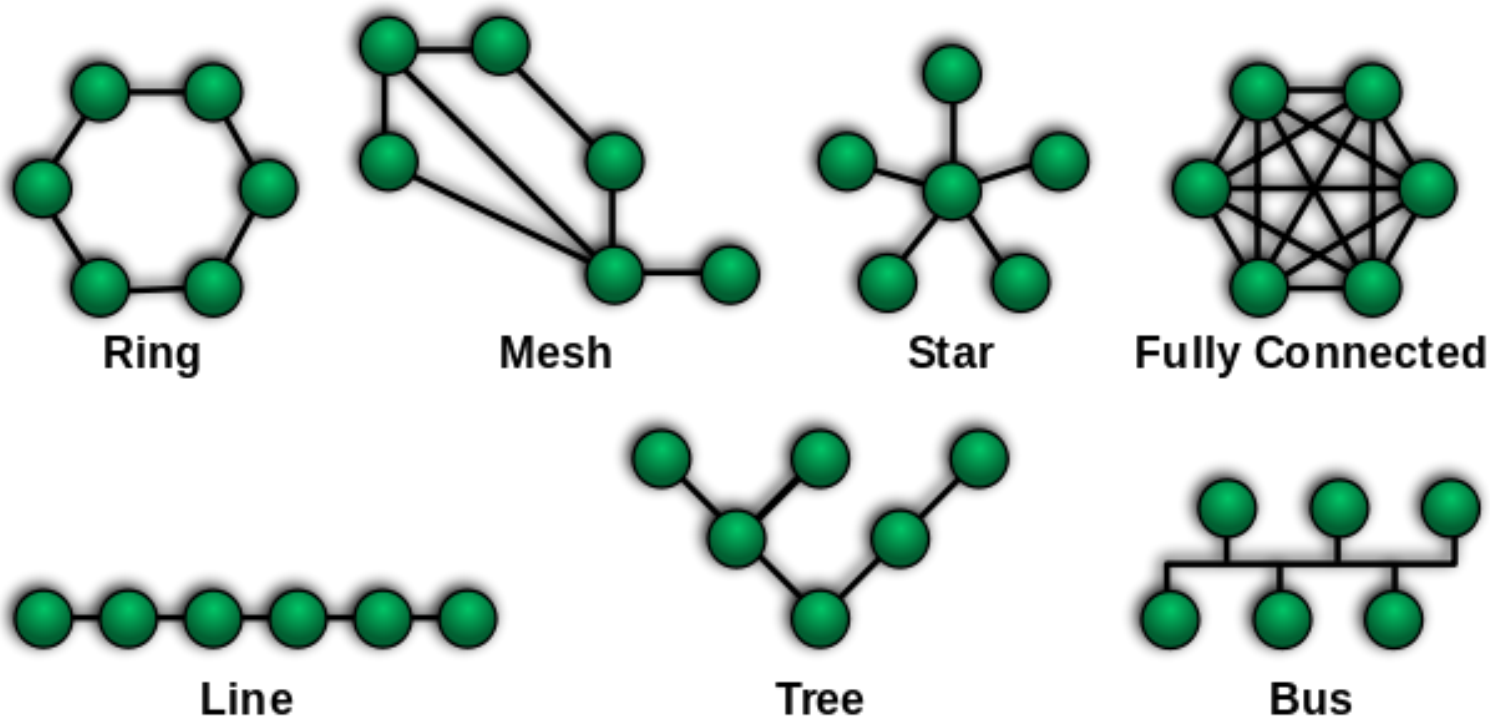


Figure : upload.wikimedia.org

Topologies

- **Point-to-point:** two entities directly connected to each other (tunnel).

[1] Hong Kong protesters use a mesh network to organize

Topologies

- **Point-to-point:** two entities directly connected to each other (tunnel).
- **Ring:** data go around the ring, unidirectional way network.

[1] Hong Kong protesters use a mesh network to organize

Topologies

- **Point-to-point:** two entities directly connected to each other (tunnel).
- **Ring:** data go around the ring, unidirectional way network.
- **Mesh:** all nodes cooperate in the distribution of data in the network[1].

[1] Hong Kong protesters use a mesh network to organize

Topologies

- **Point-to-point:** two entities directly connected to each other (tunnel).
- **Ring:** data go around the ring, unidirectional way network.
- **Mesh:** all nodes cooperate in the distribution of data in the network[1].
- **Star:** all messages go through the same central node, reducing network failure.

[1] Hong Kong protesters use a mesh network to organize

Topologies

- **Point-to-point:** two entities directly connected to each other (tunnel).
- **Ring:** data go around the ring, unidirectional way network.
- **Mesh:** all nodes cooperate in the distribution of data in the network[1].
- **Star:** all messages go through the same central node, reducing network failure.
- **Fully connected:** all nodes are connected to all other nodes.
